

Dr. Christoph Blöcher has been working in the field of industrial wastewater treatment and recycling since more than 10 years and obtained experience in a high variety of branches. He has a substantiated practical experience as well as a qualified scientific record.

He holds a M. Sc. in Environmental Engineering from the Technical University of Berlin and a PhD in Environmental Process Technology from Saarland University, both with specialisation in wastewater treatment.

He started his career at the Institute of Environmentally Compatible Process Technology in the R&D of wastewater treatment and recycling, with special focus on membrane bioreactors. In 2004 he joined Bayer Technology Services GmbH and is since then responsible for the development and realisation of wastewater treatment solutions for Bayer production facilities and external customers, with primary responsibility for biological and oxidation processes.

In addition, he is lecturer in wastewater treatment at the University of Applied Sciences, Düsseldorf, Germany. His scientific record shows more than 20 publications in peer reviewed international journals and presentations at international conferences.
